

SITEMASTER 200® v4

Changing the MSSQL Server Instance that SiteMaster uses.

Problem: You have already entered the Server Name to connect to a SQL Server instance, and now you wish to switch to another instance.

Solution: By deleting the SiteMaster ODBC.dat file, when you run SiteMaster the Enter Server Name screen will be displayed.

1. On the client computer go to the Documents folder, and open the SiteMaster folder.
2. Delete the ODBC.dat file.
3. Run SiteMaster.
4. The Enter Server Name screen is displayed.
5. Type in the name for the SQL Server Instance that you want to use.
