

## **The Two Different Versions of SiteMaster 200 v4**

### **SiteMaster 200 v4 Facility Version**

Schlage Part #SM01-391 N N

This version supports Allegion Registered Key Systems that you import into SiteMaster. The purpose, is to allow Allegion (Schlage and Falcon) to produce your original registered system(s), maintain it, and expand it as necessary under your guidelines. You may also work with Allegion Representatives and/or Service Providers, to help you to plan out and implement your Key System(s) that is then ordered. As your Key System(s) expands, you import subsequent files, adding to your Key Number and Cylinder/Core records in SiteMaster. When you import a file, you choose the correct Manufacturer's System (i.e., Schlage Everest 29 R Family 7 Pin) and then you type in the name that you want to assign to the Key System. This means, that this version of SiteMaster does not include the Manufacturer's Systems and Key Systems Screens in the LE version, but the data is stored in the background. With this version, you will add the majority of your keys, if not all of your keys, using the Load Allegion Registered Key System feature.

### **SiteMaster 200 v4 Facility Version with Lockshop Enhancement (LE)**

Schlage Part #SM01-392 N N

This version supports Allegion Registered Key Systems that you can import into SiteMaster, plus you get the additional Manufacturer's Systems and Key Systems Screens. With this version, you can add other Manufacturer's Systems including other brands and set up the specifications and keyways for those systems. You also get the Key Systems Screen where you can add new Key Systems that are based on the Manufacturer's Systems that you've added. In the Key Systems Screen the Program provides you with two Wizards, Create System Keys and Add Key Numbers and Cylinders. You can use these Wizards to generate and load your own Key Number and Cylinder/Core records that you produce, maintain, and expand. This means that you can import registered Allegion Key Systems that the Factory maintains, plus add your own Key Systems that you maintain. You may also be able to import your existing key systems.

**Note:** If you start with the Facility version of SiteMaster, you can upgrade to the Lockshop Enhancement version by purchasing it directly from Matrix Security.
