

Updating SiteMaster 200 v4

For technical support and troubleshooting, always update your SiteMaster v4 to the latest version. Our updates are available under the Software Updates tab at <https://www.matrixsecurity.com/4Support.html>

To apply a SiteMaster 200 v4 update:

1. All users must quit SiteMaster.
2. Backup all of your SiteMaster v4 databases (datasets).
3. The update is normally a zipped file, so after you download it extract the executable (.exe) file.
4. Do not run the update file.
5. Simply add the update file to the SITEMASTER 200® v4.0 install directory.
6. Run SiteMaster.
7. Apply the update file to any additional SiteMaster client PCs.
