# Sitemaster 200® Initial Setup Guide

**Sitemaster 200® Version required: 4.05 or greater**

**When to use this guide:**

- You are setting up a new Sitemaster 200® system;
- You have migrated the databases to a new server and are making the initial connection;
- You have updated the password on an existing installation.

**If you are migrating to a new server**

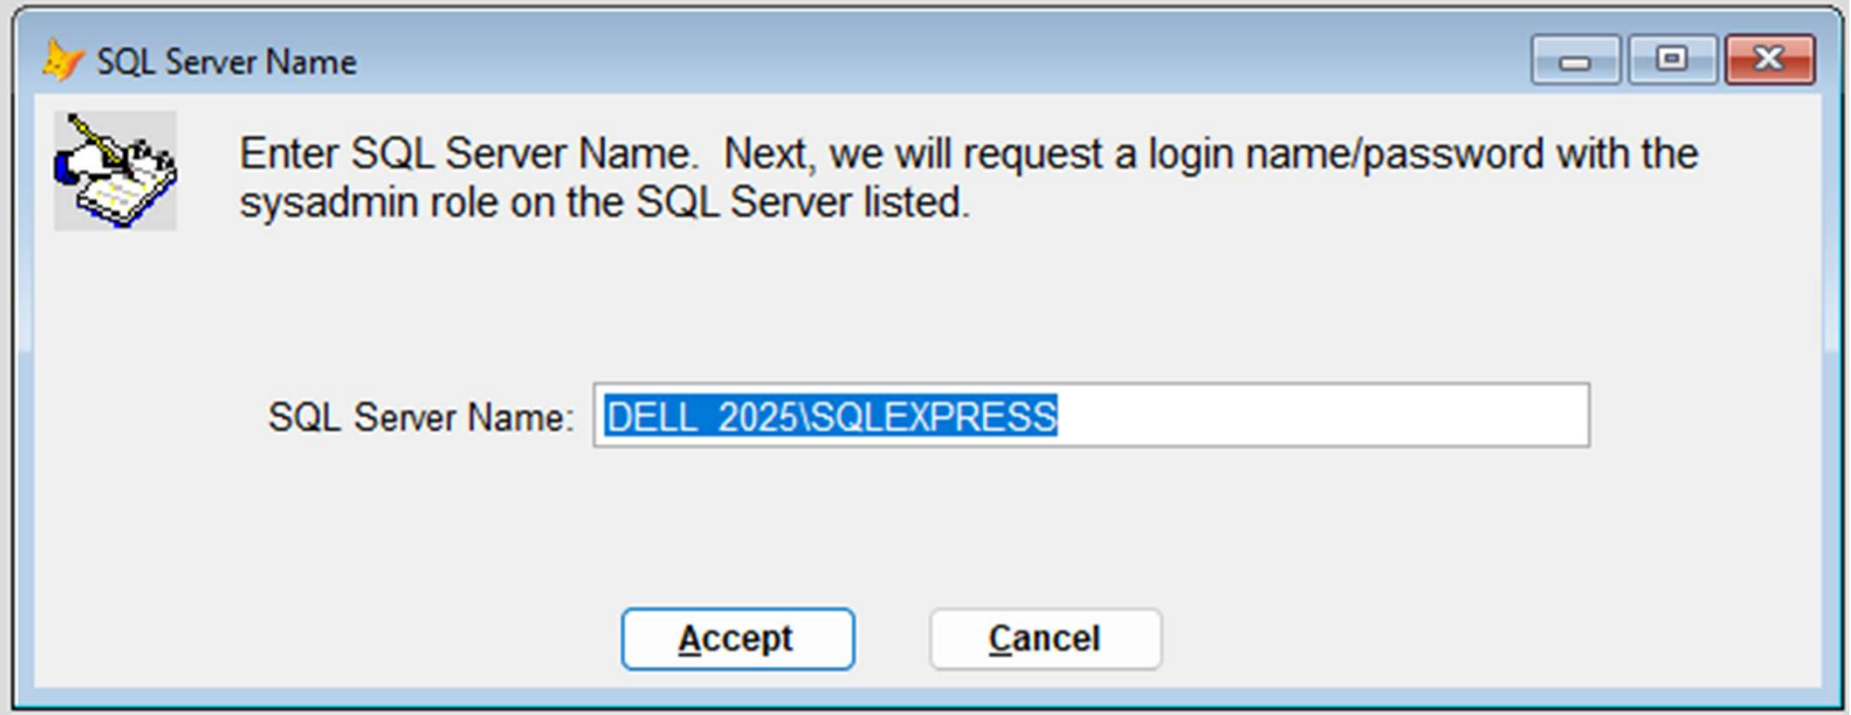

Please copy your existing databases from the original server to the new server. The required files are:

- MATRIXCTRL
- DEMODATA
- SM2OO40
- Any additional datasets you have created (not common)

# Entering Server Information

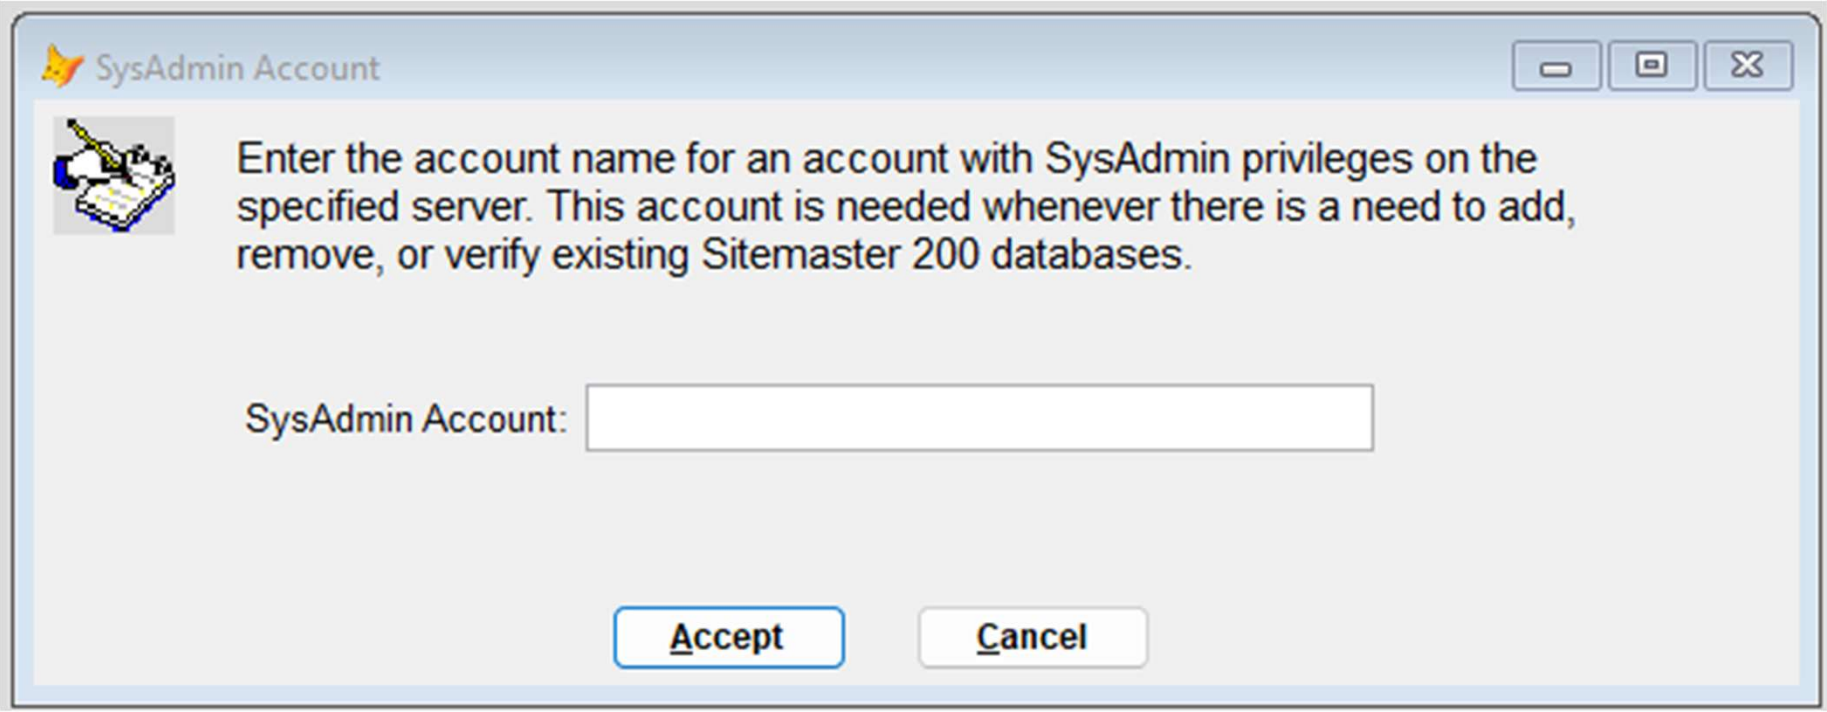

Enter the SQL server's hostname. If you are using SQL Express installed on the same workstation, your entry would be similar to the one shown below. Otherwise, it would be just the server's hostname (i.e. SQLSERVER2025)

# Entering SysAdmin Account Information – Part 1

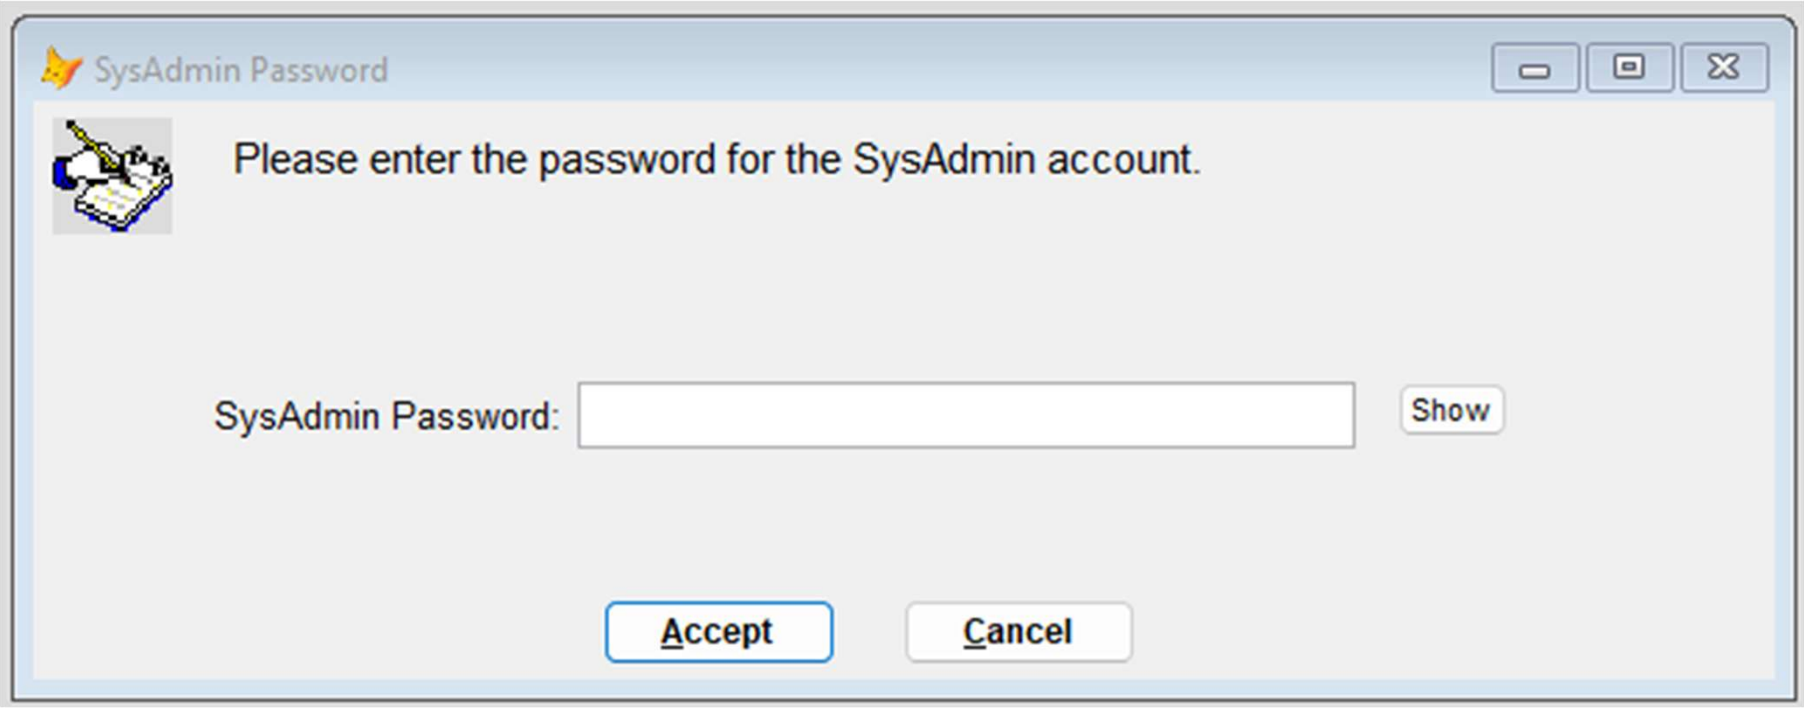

Enter a Login ID on your SQL server that has SysAdmin rights on that server. This account will be used to create a new Sitemaster 200®'s Service Account or connect using an existing Sitemaster 200® service account. If necessary, it will also create the Sitemaster 200® databases.

# Entering SysAdmin Account Information – Part 2

Enter the Password for your SysAdmin account.

# Entering Sitemaster 200®'s Service Account Information

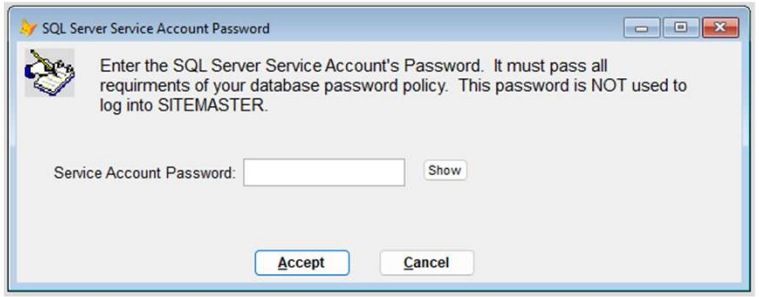

You can choose to let Sitemaster 200® use the randomly generated password it created (displayed on screen), or enter a password of your own. This password is only used by Sitemaster 200® when connecting to the server and will not be used by any end-user. They will have their own User ID and Password to access Sitemaster 200®.

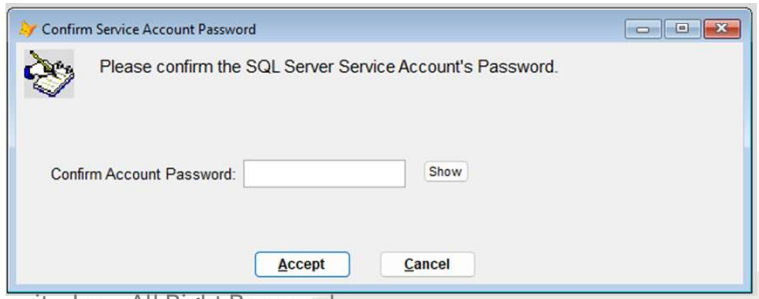

Note: if you will be setting up multiple workstations, it is advised to use your own password, as you will need to enter it on each additional workstation.

If you select Yes, Sitemaster 200 ® will use the randomly generated password.

If you select No, you will be requested to enter and confirm your password.

# Completion Screen

Sitemaster 200® will check your server and see if it's databases already exist. If not, it will create them. If they do exist, it will ensure they are all up to date for the current version. Once it has completed that process, it will display the success message shown below.

From here, the system will run normally and present you with a login screen.

Note: if this is the first time you are running Sitemaster 200®, the User Name will be ADMIN, and the Password will be ADMIN. You will be required to change it.
