Sitemaster 200®

System Information

Basic Info...

- Sitemaster 200® software is COTS software installed on a local workstation or virtual system running Windows operating systems and stores all information in a locally controlled SQL Server or SQL Express Server and is accessed via a non-persistent ODBC connection. There is no internet access to your data.
- No access to the information is needed by Matrix Security, Inc.
- Support is supplied via email, phone, website, and occasional screen sharing sessions.

Data Flow Diagram

Requirements:

Operating Systems: Windows 10 and 11

Memory and Processor:

Sitemaster 200® can successfully run when you follow the minimum requirements for the Operating System for memory and processors.

Hard Disk:

Over time Sitemaster 200® will use up to approximately 500mb of storage of SQL Server space. Workstations need appx 200mb of storage.

Data Storage:

The data is stored using Microsoft SQL Server or SQLExpress database. If using SQLExpress, we suggest downloading the installer directly from Microsoft.

Monitor:

1024 X 768 minimum resolution

SQL Server/SQL Express Versions supported:

SQL Server 2012 – 2022
SQL Express 2012 - 2022

Although supported, we do not recommend using SQL Server or SQLExpress versions older than 2019.

Our installer can be run from the installation disk or downloaded from our website... www.matrixsecurity.com.
